5 WAYS TO CONTRIBUTE TO RUBY ON RAILS

Want to contribute to Rails but don't know how to get started? Here are 5 ways to do it.

1 FIND ISSUES LABELED AS "GOOD FIRST ISSUES"

These are labeled as **Good First Issues**. There's not a lot of them and they can get closed pretty fast! They might not be simple for beginners in Rails and you can always ask for help in the issue comments.

2 PICK AN ISSUE LABELED AS "WITH REPRODUCTION STEPS"

They're good because you have a way to check that the bug really exists. You can fix the bug and use the reproduction steps to check your work.

3 FIX THE BUGS YOU FIND YOURSELF ("YOUR BUG")

When you're working on an app, you might run into a framework bug. That's good, now you can fix the bug yourself! This can happen when you're using the latest version of the framework, or using one of its newer features.

4 ADD REPRODUCTION STEPS TO NEW ISSUES

You can pick an issue that does not have reproduction steps. Try to understand what's going on, and then add the reproduction steps yourself. This way, you can help the Rails core team by checking if a new issue is valid. Great way to build your debugging skills!

5 I'M READY!

You can always pick any open issue (that no one else is working on) and try to figure things out as you go. That's cool too! Just pick one and get to work. Have fun!
